CONCLUSIONES

La **regresión lineal** permite predecir el comportamiento de una variable a partir de otra. Esta herramienta puede ser de gran utilidad para negocios, debido a que permite conocer una predicción de asistentes y no asistentes, o cualquier variable que sea de interés para el usuario.

Considero que mediante este ejemplo se pueden llegar a ver las posibilidades que tiene la **regresión lineal**, como en este caso vimos una predicción de los alunmosasistentes e inasistente segun al numero de matriculados de este colegio.

Al haber visto clases de estadística anteriormente, puedo entender la gran utilidad y lo frecuente que es el uso de la **regresión lineal**; sin embargo, esta resulta la primera vez que lo hago de manera tan eficaz, como es aquí en R.
